

DDR2 Overclocked Memory Modules

Overclocked Memory for Gaming Enthusiasts

Cold Fusion™ overclocked modules deliver an adrenaline pumping surge of gaming power to the latest DDR2-based motherboards. Clocked at 1066MHz with seriously low latencies of 5-5-5-15, Cold Fusion™ is the ultimate DDR2 upgrade for any extreme gamer.

PC game titles are constantly being released with increasing graphic intensity. Hardcore gamers require serious memory performance if they want to enjoy the latest games in all their sword swinging, rocket launching glory. Cold Fusion™ modules relieve the dreaded memory bottleneck that plagues high end systems, and allows them to perform better than ever.

As always, US Modular's quality, and stable memory is backed by a Lifetime Warranty, and 24 hour technical support staff.

Part Numbers:

US1066CF1GB - 1gb (1x1024)
US1066CF1GBx2 - 2gb (2x1024) Kit

Specifications:

- 1066MHz DDR2
- 5-5-5-15 (CAS-TRCD-TRP-TRAS)
- Unbuffered
- Cold Fusion™ Heat Spreaders
- 2.2 Volts
- Available in 1gb singles, and 2gb kits (2x1024)
- Lifetime Warranty
